

August 8, 2025

Kris Mayes
Attorney General
2005 N Central Ave
Phoenix, AZ 85004-1545

Dear Attorney General Mayes:

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across Arizona.

In April 2024, EPA announced that Arizona would receive \$156 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which the Arizona Governor's Office of Resiliency worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to the Arizona Governor's Office of Resiliency that promised to lower energy costs for thousands of people across Arizona. Since then, the Executive Arizona Governor's Office of Resiliency has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

Arizona's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program 11,000 households across Arizona would gain access to low-cost, reliable solar energy that would lower their electricity bills. The program is expected to deliver over \$164 million in bill savings for participating families— all while boosting grid resilience and promoting energy independence. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of Arizona's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across Arizona. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising, the average retail price of electricity paid by customers in Arizona rose by 1.7 percent from May 2024 to May 2025. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in Arizona are paying the price. Investments made through Arizona's Solar for All program are a vital tool for combating these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. The Arizona Governor's Office of Resiliency has invested time, energy, and resources in developing our state's Solar for All program and ensuring that it delivers for people across Arizona. Terminating the Arizona Governor's Office of Resiliency's grant would waste federal funding that has already been spent, denying hardworking families and small businesses the benefits of those investments.

EPA's attempt to terminate Arizona's Solar for All program is misguided and unjustified. If EPA succeeds, everyday people across Arizona will be forced to foot the bill through higher electricity bills. **We urge you to take swift action to protect consumers in Arizona from this shortsighted power grab – and we thank you for your leadership.**

Rob Bonta
California Attorney General
1300 I Street
Sacramento, CA 95814

Dear Attorney General Bonta:

We write to express our deep concern about the U.S. Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across California.

In April 2024, the EPA announced that California would receive \$250 million under the Solar for All program. This award followed a rigorous and competitive application process led by the California Energy Commission (CEC), the California Public Utilities Commission (CPUC), and the California Labor and Workforce Development Agency (LWDA), who proposed a program to expand access to low-cost distributed energy technologies for low-income and disadvantaged communities. While the EPA awarded funds to the CPUC, CEC, and LWDA with the goal of reducing energy costs for thousands of Californians, progress in implementing the program has been limited. To date, the agencies continue to coordinate with EPA and other partners, but key details and deployment plans remain pending, raising concerns about the timely and effective use of this historic federal investment.

California's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program thousands of households across California would gain access to low-cost, reliable solar energy that would lower their electricity bills each year – all while boosting grid resilience and promoting energy independence. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of California's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across California. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. In addition to these communities, these funds would serve Tribal Nations within the state. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. Since 2018, the average price of electricity sold by California's biggest electric utilities rose by [over 40 percent](#). Energy demand from data centers and extreme heat waves is projected to further strain the grid – and people in California are paying the price. Investments made through California's Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, while California has been awarded these funds, much of the work to implement the Solar for All program is still in the early stages. The CPUC, CEC, and LWDA have begun initial planning and coordination efforts, but significant portions of the funding have yet to be deployed to benefit communities. Terminating the grant now would risk squandering a major opportunity and could undermine the early investments of time and resources already made toward building out a program intended to lower energy costs and expand clean energy access for hardworking families and small businesses across the state.

EPA's attempt to terminate California's Solar for All program is misguided and unjustified. If EPA succeeds, everyday people across California will be forced to foot the bill through higher electricity bills. **We urge you to take swift action to protect consumers in California from this shortsighted powergrab – and we thank you for your leadership.**

Phil Weiser
Attorney General
Ralph L. Carr Judicial Building
1300 Broadway, 10th Floor
Denver, CO 80203

Dear Attorney General Weiser:

We write to express our deep concern about the Environmental Protection Agency's (EPA) purported attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across Colorado.

In April 2024, EPA announced that Colorado would receive \$156 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which the Colorado Energy Office (CEO) worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to CEO that promised to lower energy costs for thousands of people across Colorado. Since then, CEO has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

Colorado's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program, thousands of people across Colorado would gain access to low-cost, reliable solar energy that would lower their electricity bills each year – all while boosting grid resilience and promoting energy independence. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of Colorado's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across Colorado. Solar for All funds are used exclusively for low-income, rural, and other disadvantaged communities, where people are already struggling to make ends meet. In addition to these communities, these funds would serve Tribal Nations within the state. These investments will slash household electricity costs by up to 20 percent, lowering electricity bills for each household and benefiting those households by around \$400 each year.

Across the United States, electricity rates are rapidly rising. From May 2024 to May 2025, the average price of electricity rose by 7.31 percent in Colorado. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in Colorado are paying the price. Investments made through Colorado's Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. CEO has invested time, energy, and resources in developing our state's Solar for All program and ensuring that it delivers for people across Colorado. Allowing EPA to terminate CEO's grant would waste federal funding that has already been spent, denying hardworking families and small businesses the benefits of those investments.

EPA's attempt to terminate Colorado's Solar for All program is misguided and unjustified. If EPA succeeds, small businesses already strained by the abrupt and devastating changes to HR1 and the everyday people who would have benefited from new infrastructure investments and the cheaper, local power that was coming will go without these improvements. **We urge you to take swift action to protect consumers in Colorado from this shortsighted powergrab – and we thank you for your leadership.**

William Tong
Attorney General
165 Capitol Avenue
Hartford, CT 06106

Dear Attorney General Tong:

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across Connecticut.

In April 2024, EPA announced that Connecticut would receive \$62.45 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which Connecticut Department of Energy and Environmental Protection (DEEP) worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to DEEP that promised to lower energy costs for thousands of people across Connecticut. Since then, DEEP has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

Connecticut's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program, more than 12,000 households across Connecticut would gain access to low-cost, reliable solar energy that would lower their electricity bills each year – all while boosting grid resilience and promoting energy independence. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of Connecticut's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across Connecticut. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. From May 2024 to May 2025, the average price of electricity rose by 18.37 percent in Connecticut. Rising energy demand, volatile natural gas costs, and extreme heat waves are straining the grid – and people in Connecticut are paying the price. Investments made through Connecticut's Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. DEEP has invested time, energy, and resources in developing our state's Solar for All program and ensuring that it delivers for people across Connecticut. Terminating DEEP's grant would waste federal funding that has already been obligated, denying hardworking families and small businesses the benefits of those investments.

EPA's attempt to terminate Connecticut's Solar for All program is misguided and unjustified. If EPA succeeds, everyday people across Connecticut will be forced to foot the bill through higher electricity bills. **We urge you to take swift action to protect consumers in Connecticut from this shortsighted powergrab – and we thank you for your leadership.**

James Uthmeier
Office of the Attorney General
State of Florida
PL-01 The Capitol
Tallahassee, FL 32399

Dear Attorney General Uthmeier:

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across Florida.

In April 2024, EPA announced that Florida would receive \$156 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which the Solar and Energy Loan Fund of St. Lucie County, Inc. (SELF) worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to SELF that promised to lower energy costs for thousands of people across Florida. Since then, SELF has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

Florida's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program, 10,000 households across Florida would gain access to low-cost, reliable solar energy that would lower their electricity bills each year – all while boosting grid resilience and promoting energy independence. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of Florida's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across Florida. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. From May 2024 to May 2025, the average price of electricity rose by 9.51 percent in Florida. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in Florida are paying the price. Investments made through Florida's Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. SELF has invested time, energy, and resources in developing our state's Solar for All program and ensuring that it delivers for people across Florida. Terminating SELF's grant would waste federal funding that has already been spent, denying hardworking families and small businesses the benefits of those investments.

EPA's attempt to terminate Florida's Solar for All program is misguided and unjustified. If EPA succeeds, everyday people across Florida will be forced to foot the bill through higher electricity bills. **We urge you to take swift action to protect consumers in Florida from this shortsighted powergrab – and we thank you for your leadership.**

Chris Carr
Attorney General
40 Capitol Square SW
Atlanta, GA 30334

Dear Attorney General Carr:

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across Georgia.

In April 2024, EPA announced that Georgia would receive \$156 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which The Capital Good Fund worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to The Capital Good Fund that promised to lower energy costs for thousands of people across Georgia. Since then, The Capital Good Fund has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

Georgia's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program, 16,000 households across Georgia would gain access to low-cost, reliable solar energy that would lower their electricity bills each year – all while boosting grid resilience and promoting energy independence. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of Georgia's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across Georgia. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. From May 2024 to May 2025, the average price of electricity rose by .47 percent in Georgia. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in Georgia are paying the price. Investments made through Georgia's Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. The Capital Good Fund has invested time, energy, and resources in developing our state's Solar for All program and ensuring that it delivers for people across Georgia. Terminating The Capital Good Fund's grant would waste

federal funding that has already been spent, denying hardworking families and small businesses the benefits of those investments.

EPA's attempt to terminate Georgia's Solar for All program is misguided and unjustified. If EPA succeeds, everyday people across Georgia will be forced to foot the bill through higher electricity bills. **We urge you to take swift action to protect consumers in Georgia from this shortsighted powergrab – and we thank you for your leadership.**

Re: EPA's attempted withdrawal of Idaho's Solar For All funds

Dear Governor Little, Attorney General Labrador, Senators Crapo & Risch, and Congressmen
Simpson & Fulcher:

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across Idaho.

In April 2024, EPA announced that Idaho would receive \$56.54 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which the Bonneville Environmental Foundation (BEF) was selected to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to BEF that promised to lower energy costs for thousands of people across Idaho. Since then, BEF has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

Idaho's Solar for All program is an historic investment in energy affordability and economic development. Thanks to this program, 15,000 people across Idaho would gain access to low-cost, reliable solar energy that would lower their electricity bills. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of Idaho's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across Idaho. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. From May 2024 to May 2025, the average

price of electricity rose by 3.3 percent in Idaho, and many Idaho utilities are already pursuing higher rate increases than we have seen in years. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in Idaho are paying the price. Investments made through Idaho’s Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. BEF has invested time, energy, and resources in developing our state’s Solar for All program and ensuring that it delivers for people across Idaho. Our organizations have participated in initial stakeholder meetings hosted by BEF to gather feedback from Idaho communities in support of the program’s development. Terminating BEF’s grant would waste federal funding that has already been spent, denying hardworking families and small businesses the benefits of those investments.

EPA’s attempt to terminate Idaho’s Solar for All program is misguided and unjustified. If EPA succeeds, everyday people across Idaho will be forced to foot the bill through higher electricity bills.

We urge you to contact Sarah Talmage at EPA Congressional Affairs and Stuart Levenbach at OMB to request that our state's fully obligated Solar For All allocation remain in place to deliver the needed energy, cost reduction, and jobs benefits for Idaho: Talmage.Sarah@epa.gov; Stuart.Levenbach@omb.eop.gov.

Please take swift action to protect consumers in Idaho from this shortsighted powergrab – and we thank you for your leadership.

Sincerely,

Kate Bowman

Kwame Raoul
Illinois Attorney General
500 South Second Street
Springfield, IL 62701

Dear Attorney General Raoul:

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across Illinois.

In April 2024, EPA announced that Illinois would receive \$156 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which the Illinois Finance Authority worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to the Illinois Finance Authority that promised to lower energy costs for thousands of people across Illinois. Since then, Illinois Finance Authority has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

Illinois's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program, thousands of households across Illinois would gain access to low-cost, reliable solar energy that would lower their electricity bills each year – all while boosting grid resilience and promoting energy independence. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of the federal Solar for All grant to support Illinois' program is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across Illinois. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. From May 2024 to May 2025, the average price of electricity rose by 12.24 percent in Illinois. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in Illinois are paying the price. Investments made through the Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. The Illinois Finance Authority has invested time, energy, and resources in bolstering our state's Solar for All program with federal

funds and ensuring that it delivers for people across Illinois. Terminating the Illinois Finance Authority's grant would waste federal funding, denying hardworking families and small businesses the benefits of those investments.

EPA's attempt to terminate the federal Solar for All program is harmful and unjustified. If EPA succeeds, everyday people across Illinois will be forced to foot the bill through higher electricity bills. **We urge you to take swift action to protect consumers in Illinois from this shortsighted powergrab – and we thank you for your leadership.**

Anthony G. Brown
Attorney General
200 St. Paul Place,
Baltimore, MD 21202

Dear Attorney General Brown:

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across Maryland.

In April 2024, EPA announced that Maryland would receive \$62 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which The Maryland Clean Energy Center (MCEC) worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to MCEC that promised to lower energy costs for thousands of people across Maryland. Since then, MCEC has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

Maryland's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program, thousands of households across Maryland would gain access to low-cost, reliable solar energy that would lower their electricity bills each year – all while boosting grid resilience and promoting energy independence. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of Maryland's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across Maryland. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. From May 2024 to May 2025, the average price of electricity rose by 8 percent in Maryland. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in Maryland are paying the price. Investments made through Maryland's Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. MCEC has invested time, energy, and resources in developing our state's Solar for All program and ensuring that it delivers for people across Maryland. Terminating MCEC's grant would waste federal funding that has already been spent, denying hardworking families and small businesses the benefits of those investments.

EPA's attempt to terminate Maryland's Solar for All program is misguided and unjustified. If EPA succeeds, everyday people across Maryland will be forced to foot the bill through higher electricity bills. **We urge you to take swift action to protect consumers in Maryland from this shortsighted powergrab – and we thank you for your leadership.**

Andrea Joy Campbell
Attorney General
1 Ashburton Place, 20th Floor
Boston, MA 02108

Dear Attorney General Campbell:

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across Massachusetts.

In April 2024, EPA announced that Massachusetts would receive \$156 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which Massachusetts Department of Energy Resources (DOER) worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to DOER that promised to lower energy costs for thousands of people across Massachusetts. Since then, DOER has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

Massachusetts's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program, 31,000 households across Massachusetts would gain access to low-cost, reliable solar energy that would lower their electricity bills each year – all while boosting grid resilience and promoting energy independence. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of Massachusetts's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across Massachusetts. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. From May 2024 to May 2025, the average price of electricity rose by 4.25 percent in Massachusetts. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in Massachusetts are paying the price. Investments made through Massachusetts's Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. DOER has invested time, energy, and resources in developing our state's Solar for All program and ensuring that it delivers for people across Massachusetts. Terminating DOER's grant would waste federal funding that has already been spent, denying hardworking families and small businesses the benefits of those investments.

EPA's attempt to terminate Massachusetts's Solar for All program is misguided and unjustified. If EPA succeeds, everyday people across Massachusetts will be forced to foot the bill through higher electricity bills. **We urge you to take swift action to protect consumers in Massachusetts from this shortsighted powergrab – and we thank you for your leadership.**

Dana Nessel
Michigan Attorney General
525 W Ottawa St, Lansing, MI 48933

Dear Attorney General Nessel:

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across Michigan.

In April 2024, the EPA announced that Michigan would receive \$156 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which the State of Michigan, Department of Environment, Great Lakes, and Energy (EGLE) worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to EGLE that promised to lower energy costs for thousands of people across Michigan. Since then, EGLE has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars. Moreover, the Solar for All program helps the state make progress towards its MI Healthy Climate Plan to protect all Michiganders.

Michigan's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program, 18,000 low-income families across Michigan would gain access to low-cost, reliable solar energy that would lower their electricity bills. Residential households participating in the program are expected to receive a benefit equivalent to an average 20% reduction on their electricity bill. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of Michigan's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across Michigan. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. From May 2024 to May 2025, the average price of electricity rose by 3.53 percent in Michigan. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in Michigan are paying the

price. Investments made through Michigan's Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, the \$156 million Solar For All grant award was appropriated by Michigan's state legislature into EGLE's budget for fiscal year 2025, and our state is already putting these funds to work. EGLE has invested time, energy, and resources in developing our state's Solar for All program and ensuring that it delivers for people across Michigan. Terminating EGLE's grant would waste federal funding that has already been spent, denying hardworking families and small businesses the benefits of those investments.

EPA's attempt to terminate EGLE's Solar for All program is misguided and unjustified. If EPA succeeds, everyday people across Michigan will be forced to foot the bill through higher electricity bills. **We urge you to take swift action to protect consumers in Michigan from this shortsighted powergrab – and we thank you for your leadership.**

August 8, 2025

Keith Ellison
Attorney General
445 Minnesota Street, Suite 600,
St. Paul, MN 55101

Dear Attorney General Ellison:

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across Minnesota.

In April 2024, EPA announced that Minnesota would receive \$62,450,000 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which the Minnesota Commerce Department (COMM) Division of Energy Resources worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to COMM that promised to lower energy costs for thousands of people across Minnesota. Since then, COMM has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

Minnesota's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program, thousands of households across Minnesota would gain access to low-cost, reliable solar energy that would lower their electricity bills each year – all while boosting grid resilience and promoting energy independence. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of Minnesota's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across Minnesota. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. In addition to these communities, these funds would serve Tribal Nations within the state. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in Minnesota are paying the price. Investments made through Minnesota's Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. COMM has invested time, energy, and resources in developing our state's Solar for All program and ensuring that it delivers for people across Minnesota. Terminating COMM's grant would waste federal funding that has already been spent, denying hardworking families and small businesses the benefits of those investments.

EPA's attempt to terminate Minnesota's Solar for All program is misguided and unjustified. If EPA succeeds, everyday people across Minnesota will be forced to foot the bill through higher electricity bills. **We urge you to take swift action to protect consumers in Minnesota from this shortsighted powergrab – and we thank you for your leadership.**

Matthew J. Platkin
Attorney General
Richard J. Hughes Justice Complex
25 Market St,
Trenton, NJ 08611

Dear Attorney General Platkin:

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across New Jersey.

In April 2024, EPA announced that New Jersey would receive \$156 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which the New Jersey Board of Public Utilities (NJBPU) worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to NJBPU that promised to lower energy costs for thousands of people across New Jersey. Since then, NJBPU has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

New Jersey's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program, 22,000 households across New Jersey would gain access to low-cost, reliable solar energy that would lower their electricity bills each year – all while boosting grid resilience and promoting energy independence. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of New Jersey's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across New Jersey. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. From May 2024 to May 2025, the average price of electricity rose by 10.16 percent in New Jersey. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in New Jersey are

paying the price. Investments made through New Jersey's Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. NJBPU has invested time, energy, and resources in developing our state's Solar for All program and ensuring that it delivers for people across New Jersey. Terminating NJBPU's grant would waste federal funding that has already been spent, denying hardworking families and small businesses the benefits of those investments.

EPA's attempt to terminate New Jersey's Solar for All program is misguided and unjustified. If EPA succeeds, everyday people across New Jersey will be forced to foot the bill through higher electricity bills. **We urge you to take swift action to protect consumers in New Jersey from this shortsighted powergrab – and we thank you for your leadership.**

Raúl Torrez
Attorney General
408 Galisteo Street
Villagra Building
Santa Fe, NM 87501

Dear Attorney General Torrez:

First, we want to thank you for what you are doing to stand up for New Mexicans in these difficult times.

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across New Mexico.

In April 2024, the EPA announced that New Mexico would receive \$156 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which the State of New Mexico's Energy, Minerals and Natural Resources Department (EMNRD) worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to EMNRD that promised to lower energy costs for thousands of people across New Mexico. Since then, EMNRD has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

New Mexico's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program, 20,000 plus households across New Mexico would gain access to low-cost, reliable solar energy that would lower their electricity bills each year – all while boosting grid resilience and promoting energy independence. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of New Mexico's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across New Mexico. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. In addition to these communities, these funds would serve Tribal Nations within the state. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. From May 2024 to May 2025, the average price of electricity rose by 7.36 percent in New Mexico. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in New Mexico are paying the price. Investments made through New Mexico’s Solar for All program are a vital tool for combating these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. EMNRD has invested time, energy, and resources in developing our state’s Solar for All program and ensuring that it delivers for people across New Mexico. Terminating EMNRD’s grant would waste federal funding that has already been spent, denying hardworking families and small businesses the benefits of those investments.

EPA’s attempt to terminate New Mexico’s Solar for All program is misguided and unjustified. If EPA succeeds, everyday people across New Mexico will be forced to foot the bill through higher electricity bills. **We urge you to take swift action to protect consumers in New Mexico from this shortsighted power grab – and we thank you for your leadership.**

The Capitol
Albany NY 12224-0341

Dear Attorney General James:

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across New York.

In April 2024, EPA announced that New York would receive \$249,800,000 under the Solar for All program. This announcement followed a rigorous and competitive application process, during which New York State Energy Research and Development Authority (NYSERDA) worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to NYSERDA that promised to lower energy costs for thousands of people across New York. Since then, NYSERDA has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

NYSERDA's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program, thousands of households across NYSERDA would gain access to low-cost, reliable solar energy that would lower their electricity bills each year – all while boosting grid resilience and promoting energy independence. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of NYSERDA's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across New York. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. From May 2024 to May 2025, the average price of electricity rose by 12.16 percent in New York. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in New York are paying the price. Investments made through NYSERDA's Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. NYSERDA has invested time, energy, and resources in developing our state's Solar for All program and ensuring that it delivers for people across New York. Terminating NYSERDA's grant would waste federal funding that has already been spent, denying hardworking families and small businesses the benefits of those investments.

EPA's attempt to terminate New York's Solar for All program is misguided and unjustified. If EPA succeeds, everyday people across New York will be forced to foot the bill through higher electricity bills. **We urge you to take swift action to protect consumers in New York from this shortsighted powergrab – and we thank you for your leadership.**

Jeff Jackson
Attorney General
114 West Edenton Street
Raleigh, NC 27603

Dear Attorney General Jackson:

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across North Carolina.

In April 2024, EPA announced that North Carolina would receive \$156 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which the North Carolina Department Of Environmental Quality (DEQ) worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to DEQ that promised to lower energy costs for thousands of people across North Carolina. Since then, DEQ has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

North Carolina's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program, 12,500 households across North Carolina would gain access to low-cost, reliable solar energy that would lower their electricity bills each year – all while boosting grid resilience and promoting energy independence. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of North Carolina's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across North Carolina. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. From May 2024 to May 2025, the average price of electricity rose by 2.57 percent in North Carolina. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in North Carolina are paying the price. Investments made through North Carolina's Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. DEQ has invested time, energy, and resources in developing our state's Solar for All program and ensuring that it delivers for people

across North Carolina. Terminating DEQ's grant would waste federal funding that has already been spent, denying hardworking families and small businesses the benefits of those investments.

EPA's attempt to terminate North Carolina's Solar for All program is misguided and unjustified. If EPA succeeds, everyday people across North Carolina will be forced to foot the bill through higher electricity bills. **We urge you to take swift action to protect consumers in North Carolina from this shortsighted powergrab – and we thank you for your leadership.**

David Sunday
Attorney General
16th Floor, Strawberry Square
Harrisburg, PA 17120

Dear Attorney General Sunday:

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across Pennsylvania.

In April 2024, EPA announced that Pennsylvania would receive \$156 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which the Pennsylvania Energy Development Authority (PEDA) worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to PEDA that promised to lower energy costs for thousands of people across Pennsylvania. Since then, PEDA has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

Pennsylvania's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program, 14,000 households across Pennsylvania would gain access to low-cost, reliable solar energy that would lower their electricity bills each year – all while boosting grid resilience and promoting energy independence. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of Pennsylvania's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across Pennsylvania. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. From May 2024 to May 2025, the average price of electricity rose by 3.82 percent in Pennsylvania. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in Pennsylvania are paying the price. Investments made through Pennsylvania's Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. PEDA has invested time, energy, and resources in developing our state's Solar for All program and ensuring that it delivers for people

across Pennsylvania. Terminating PEDA's grant would waste federal funding that has already been spent, denying hardworking families and small businesses the benefits of those investments.

EPA's attempt to terminate Pennsylvania's Solar for All program is misguided and unjustified. If EPA succeeds, everyday people across Pennsylvania will be forced to foot the bill through higher electricity bills. **We urge you to take swift action to protect consumers in Pennsylvania from this shortsighted powergrab – and we thank you for your leadership.**

Alan Wilson
South Carolina Attorney General
1000 Assembly Street, Room 519
Columbia, S.C. 29201

Dear Attorney General Wilson:

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across South Carolina.

In April 2024, EPA announced that South Carolina would receive \$124,440,000 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which the South Carolina Office of Resilience (SCOR) worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to SCOR that promised to lower energy costs for thousands of households across South Carolina. Since then, SCOR has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

South Carolina's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program, families across South Carolina would gain access to low-cost, reliable solar energy that would lower their electricity bills each year – all while boosting grid resilience and promoting energy independence. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of South Carolina's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across South Carolina. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. From May 2024 to May 2025, the average price of electricity rose by 11.82 percent in South Carolina. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in South Carolina are paying the price. Investments made through South Carolina's Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. SCOR has invested time, energy, and resources in developing our state's Solar for All program and ensuring that it delivers for people across South Carolina. Terminating SCOR's grant would waste federal funding that has already been spent, denying hardworking families and small businesses the benefits of those investments.

EPA's attempt to terminate South Carolina's Solar for All program is misguided and unjustified. Derek Brown
Attorney General
Utah State Capitol Complex
350 North State Street Suite 230
SLC UT 84114

Dear Attorney General Brown:

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across Utah.

In April 2024, EPA announced that Utah would receive \$62.45 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which the Utah Office Of Energy Development worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to Utah Office Of Energy Development that promised to lower energy costs for thousands of households across Utah. Since then, the Utah Office Of Energy Development has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

Utah's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program low-income families across Utah would gain access to low-cost, reliable solar energy that would lower their electricity bills. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of Utah's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across Utah. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. In addition to these communities, these funds would serve Tribal Nations within the state. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. From May 2024 to May 2025, the average price of electricity rose by 15.24 percent in Utah. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in Utah are paying the price. Investments made through Utah's Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. The Utah Office Of Energy Development has invested time, energy, and resources in developing our state's Solar for All program and ensuring that it delivers for people across Utah. Terminating Utah Office Of Energy Development's grant would waste federal funding that has already been spent, denying hardworking families and small businesses the benefits of those investments.

EPA's attempt to terminate Utah's Solar for All program is misguided and unjustified. If EPA succeeds, everyday people across Utah will be forced to foot the bill through higher electricity bills. **We urge you to take swift action to protect consumers in Utah from this shortsighted powergrab – and we thank you for your leadership.**

Jason Miyares
Attorney General
202 North 9th Street
Richmond, Virginia 23219

Dear Attorney General Miyares:

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across Virginia.

In April 2024, EPA announced that Virginia would receive \$156 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which Virginia Energy worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to Virginia Energy that promised to lower energy costs for thousands of households across Virginia. Since then, Virginia Energy has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

Virginia's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program low-income families across Virginia would gain access to low-cost, reliable solar energy that would lower their electricity bills. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of Virginia's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across Virginia. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. These investments are required to slash household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. From May 2024 to May 2025, the average price of electricity rose by 3.08 percent in Virginia. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in Virginia are paying the price. Investments made through Virginia's Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. Virginia Energy has invested time, energy, and resources in developing our state's Solar for All program and ensuring that it delivers for people across Virginia. Terminating Virginia Energy's grant would waste federal

funding that has already been spent, denying hardworking families and small businesses the benefits of those investments.

EPA's attempt to terminate Virginia's Solar for All program is misguided and unjustified. If EPA succeeds, everyday people across Virginia will be forced to foot the bill through higher electricity bills. **We urge you to take swift action to protect consumers in Virginia from this shortsighted powergrab – and we thank you for your leadership.**

Josh Kaul
Wisconsin Attorney General
7 West Main Street,
Madison, WI 53703

Dear Attorney General Kaul:

We write to express our deep concern about the Environmental Protection Agency's (EPA) attempt to dissolve the Solar for All program, including terminating our state's grant under that program. We urge you to use every tool at your disposal to push back against this unwarranted action that will harm families and small businesses across Wisconsin.

In April 2024, EPA announced that Wisconsin would receive \$62.4 million under the Solar for All program. This announcement followed a rigorous and competitive application process, during which the Wisconsin Economic Development Corporation (WEDC) worked tirelessly to develop a program that would expand access to low-cost distributed energy technologies in our state. EPA ultimately awarded funds to WEDC that promised to lower energy costs for thousands of people across Wisconsin. Since then, WEDC has worked closely with EPA and other state partners to ensure that this public investment has the structure, guardrails, and oversight needed to ensure efficient and effective use of taxpayer dollars.

Wisconsin's Solar for All program is a historic investment in energy affordability and economic development. Thanks to this program, 15,000 households across Wisconsin would gain access to low-cost, reliable solar energy that would lower their electricity bills. Given the Trump Administration's stated commitment to lowering energy costs for all Americans, the proposed termination of Wisconsin's Solar for All grant is baffling.

EPA's proposed termination could not come at a worse time for hardworking families and small businesses across Wisconsin. Solar for All funds are exclusively designated for use in low-income, rural, and other disadvantaged communities where people are already struggling to make ends meet. These investments are required to slash (reduce instead of slash?) household electricity costs by 20 percent, lowering electricity bills for each household that benefits from the program by \$400 each year.

Across the United States, electricity rates are rapidly rising. From May 2024 to May 2025, the average price of electricity rose by 6.26 percent in Wisconsin. Soaring energy demand from data centers and extreme heat waves are straining the grid – and people in Wisconsin are paying the price. Investments made through Wisconsin's Solar for All program are a vital tool for combatting these skyrocketing energy prices.

Moreover, our state is already putting these funds to work. WEDC has invested time, energy, and resources in developing our state's Solar for All program and ensuring that it delivers for people across Wisconsin. Terminating WEDC's grant would waste federal funding that has

already been spent, denying hardworking families and small businesses the benefits of those investments.

EPA's attempt to terminate Wisconsin's Solar for All program is misguided and unjustified. If EPA succeeds, everyday people across Wisconsin will be forced to foot the bill through higher electricity bills. **We urge you to take swift action to protect consumers in Wisconsin from this shortsighted powergrab – and we thank you for your leadership.**
